

Paint Stripper

Solvent Based Paint Remover

FEATURES

Cameleon Paint Stripper is a highly concentrated paint remover based on dichloromethane. The product has been specifically formulated to easily remove many different types of coatings from a variety of substrates.

Produced in gel-form, **Cameleon Paint Stripper** is easily applied to vertical surfaces, and can be used to remove paint, including graffiti, from unpainted surfaces.

Cameleon Paint Stripper is easily removed with water

RECOMMENDED USES

Cameleon Paint Stripper can be used to safely remove unwanted coatings such as:

- Enamels
- Urethanes
- Acrylics

From substrates including:

- Metal
- Timber
- Masonry surfaces
- Brick and plaster

DIRECTIONS FOR USE

Apply an even coat of Cameleon Paint Stripper using a clean brush or implement. Allow 5 -10 minutes contact time, during which the paint should start to wrinkle and lift from the substrate. Scrape or wash the paint from the surface. If required apply a second application. The stripped surface should be thoroughly cleaned with water or mineral turps - it is essential that all traces of old paint and paint stripper is fully removed prior to painting.

PRECAUTIONS

Cameleon Paint Stripper is non-flammable and non-caustic, however the main ingredient is volatile - this may cause pressure build up in the container. Care should always be taken when opening containers. Always replace the lid when not in use and store in a cool dry place.

IMPORTANT. See the Cameleon Paints General Safety Data Sheet, Product label, and Material Safety Data Sheet (MSDS) for health and safety information prior to use.
